Bi-folding door systems

Product Overview Information Sheet

Link Controls in conjunction with our partner *Ovitor* have a number of solutions for Bi-folding and Quad folding door systems. These doors consist of panels that move horizontally to form an opening.

These types of doors have a distinct advantage over conventional sliding door in that they can operate at faster speeds.

Where as a sliding door may operate at 0.25m/sec a bi-folding door system can operate at speeds in excess of 0.5m/sec.

The **Fastfold system** comprises of an industrial duty hollowshaft operator mounted on a smooth running trolley system.

A full range of controls including inverter control can be provided to ensure optimum performance.
