Tubular Motors Product Overview Information Sheet

Tubular motors were originally designed to automate small blinds and window shutters. The largest markets being France, Italy and Germany where shutters and blinds are incorporated into the design of the domestic and commercial buildings. In Great Britain tubular motors have gained in popularity with the requirement for increased security for retail and office premises.

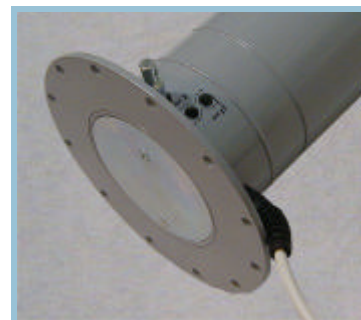

The tubular motor provides an unobtrusive means of automating shop front security shutters and grilles.

Tube motors are by design limited in their duty i.e. the number of repeated operations that can be performed. Typical number of operations would 4-6 dependent on the application. Tube motors are therefore ideal for situations where the shutter must be opened in the morning and closed at night.

Link Controls offer a full range of tube motors and controls and can provide a barrel assembly service.
